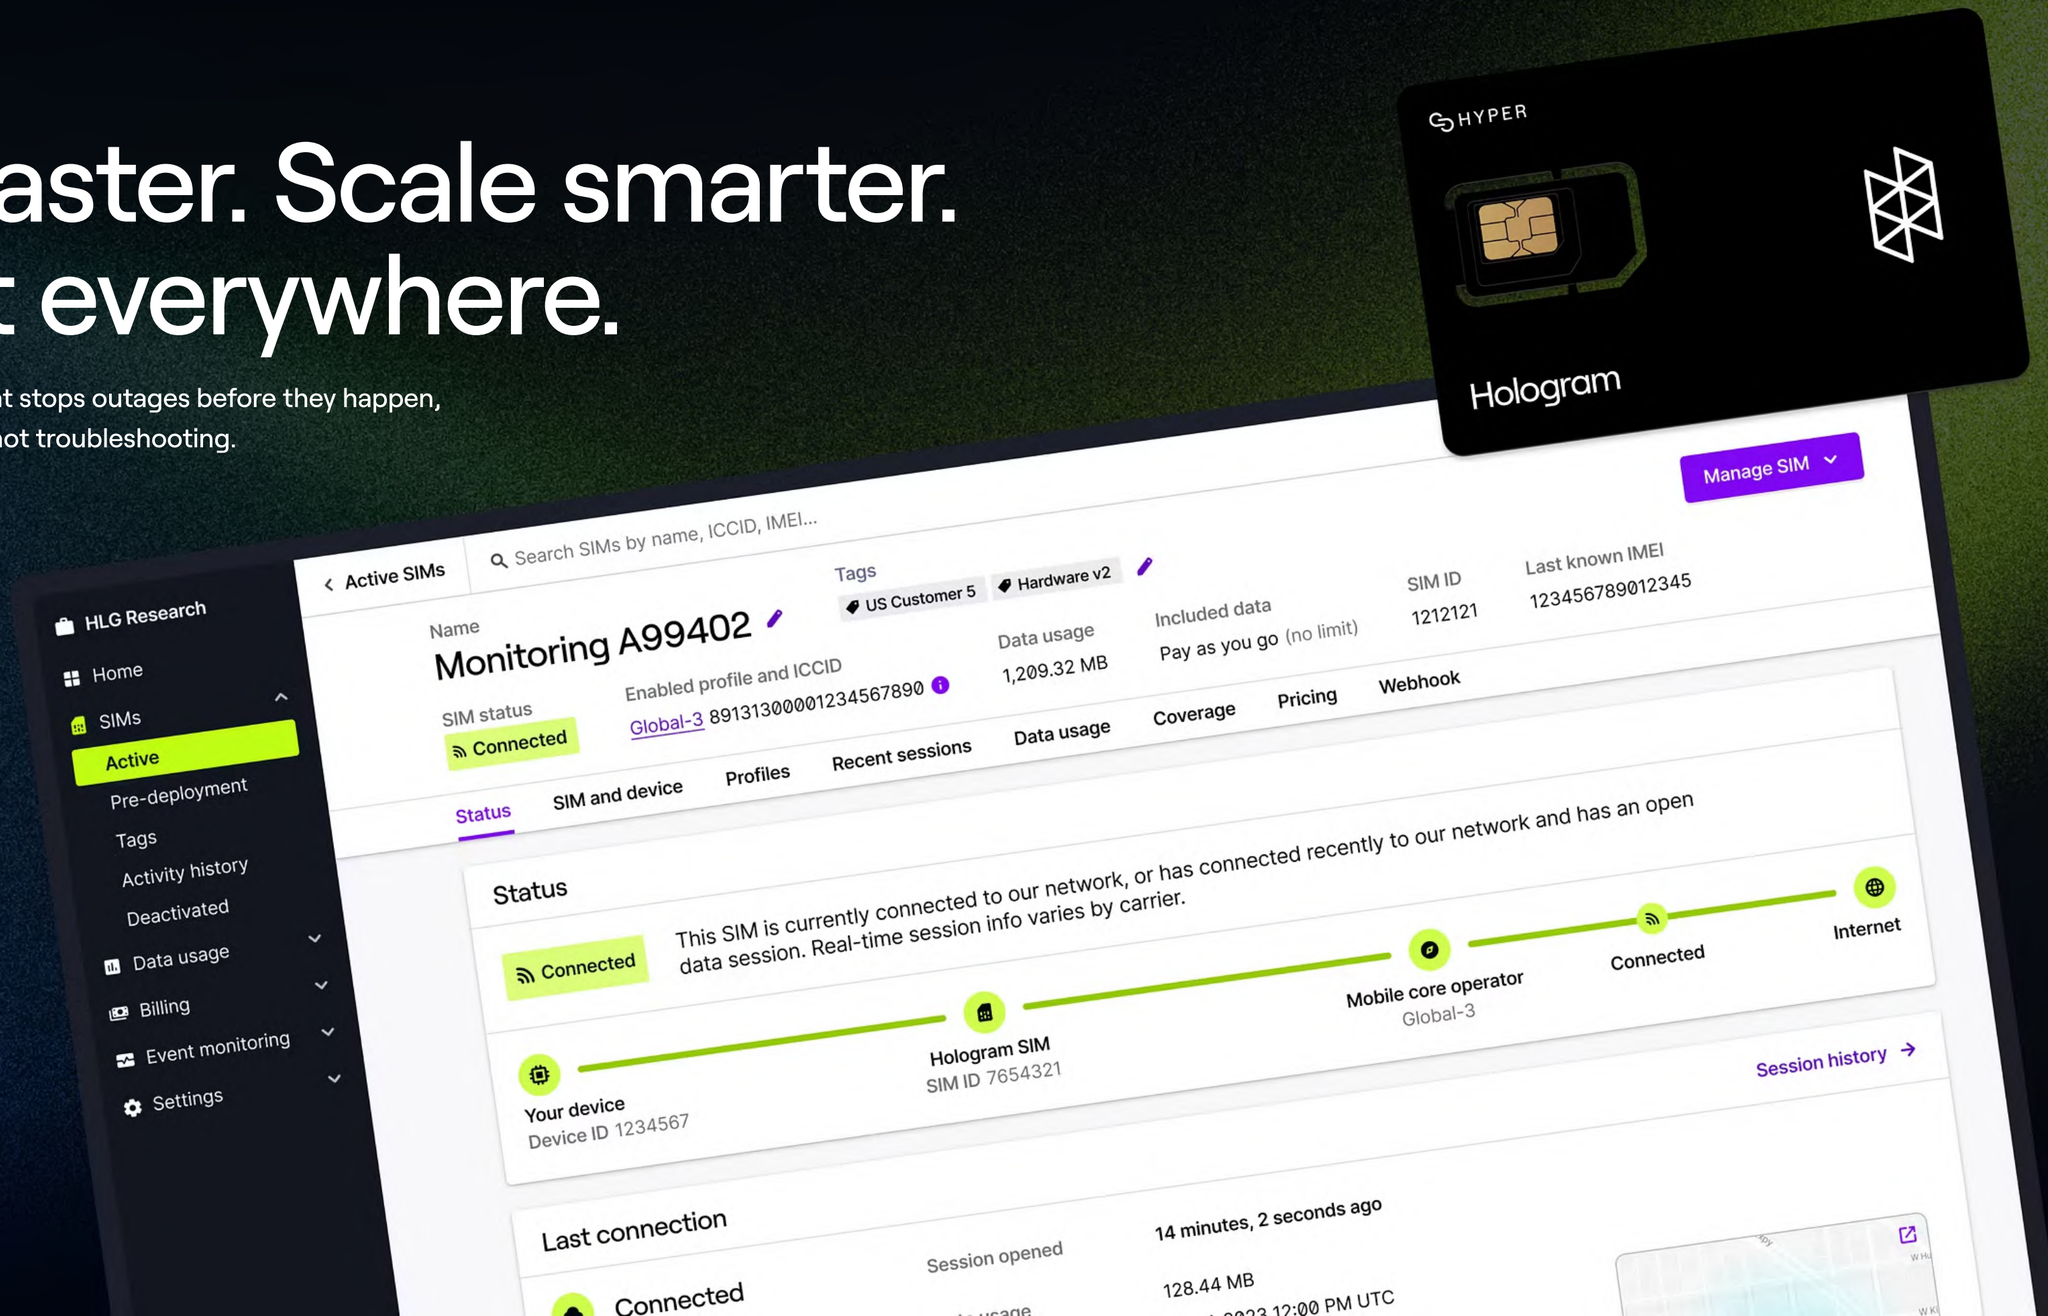
Hologram

Deploy faster. Scale smarter. Connect everywhere.

The only connectivity platform that stops outages before they happen, so you can focus on building and not troubleshooting.



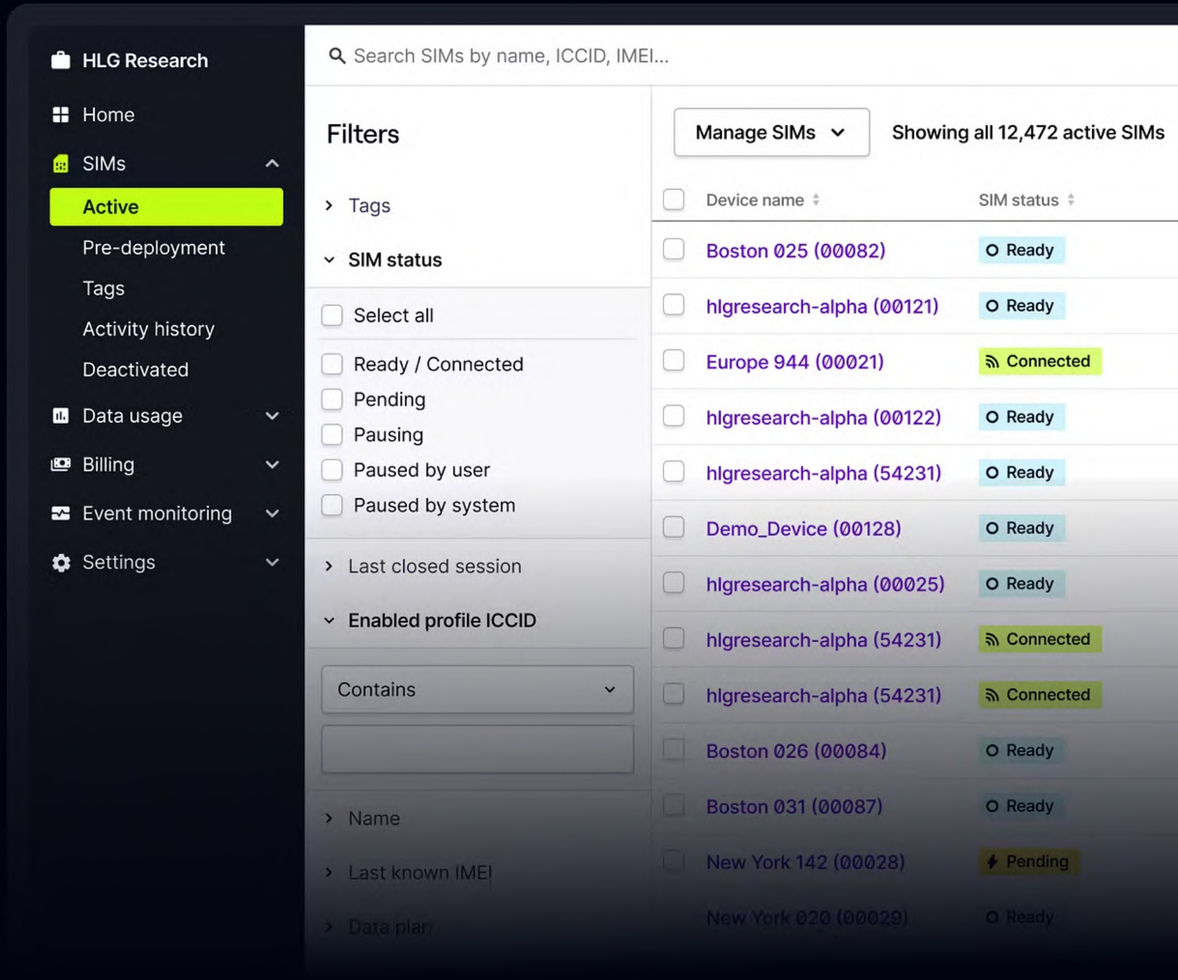
What is Hologram?

Hologram is a better way to connect IoT devices.

Hologram is the only end-to-end IoT connectivity platform that stops outages before they start, so businesses can deploy, manage, and scale devices globally with the kind of reliability that protects their bottom line.

It's meticulously built, incredibly fast, and comes with powerful features that unlock the full potential of your IoT deployments.

- Outage protection
- Usage analytics
- Pre-deployment testing
- Expert support
- Global coverage
- Hyper SIMs
- Native profiles
- REST API



The problem with most connectivity providers

Most connectivity providers are a liability, not an asset.

Unreliable connectivity

- Frequent outages
- Spotty coverage
- Low throughput
- High latency
- Single-carrier dependency

Complicated workflows

- Multiple carrier relationships
- Slow, manual processes
- Troubleshooting across multiple platforms
- Regional compliance requirements
- Fractured reporting and billing

Frustrating software

- No visibility on device health and performance
- Limited or non-existent APIs
- No clear root cause of connectivity problems
- Clunky, confusing interfaces
- Can’t integrate with existing systems

The problem with most connectivity providers

Is your provider protecting your revenue, or putting it at risk?

- Every minute of downtime means lost transactions, missed data, and unhappy customers.
- Slow time-to-market delays revenue as devices sit in warehouses instead of generating value.
- Inefficient operations drain resources that could be invested in growth.
- Customer churn increases when connectivity problems erode trust in your product.

How is Hologram different?

Anyone can sell you a SIM card. Hologram delivers measurable ROI.

From 50% reduction in connectivity costs to guaranteed uptime that protects revenue streams, our platform transforms connectivity from a line-item expense into an investment with quantifiable returns.

50%

> Verkada

How is Hologram different?

Hologram is designed for the needs of modern IoT devices and teams.

Protect

Prevent outages before they impact your bottom line with multi-core technology that anticipates and resolves connectivity issues automatically.

- Contractually guaranteed uptime
- Multi-core redundancy technology
- Automatic carrier switching
- Outage detection and prevention
- Network performance monitoring

Deploy

Launch IoT devices anywhere with a single SIM solution that works across 190+ countries and 550+ carriers without complex integration or configuration.

- Global Hyper SIM coverage
- eUICC profile management
- Remote SIM provisioning
- Instant activation
- Pre-deployment testing tools

Manage

Control your operations through our enterprise-grade software that delivers real-time visibility, actionable insights, and tools to streamline fleet operations.

- Real-time connectivity monitoring
- Data usage analytics
- Automated alerts and notifications
- Bulk actions for device groups
- Detailed session reporting
- Support from expert solutions engineers

How is Hologram different?

Hologram is designed for the needs of modern IoT devices and teams.

Optimize

Maximize ROI and minimize costs with intelligent tools that help you control spending, improve efficiency, and extend device lifespan.

- Transparent usage-based pricing
- Configurable data limits
- Automated usage alerts
- Battery-saving network settings
- Performance optimization tools

Secure

Protect your devices and data with enterprise-grade security features built into every layer of the connectivity platform.

- Private APNs
- VPN tunnels
- Remote device access
- End-to-end encryption
- Access controls and authentication
- Compliance with industry standards

Scale

Grow your IoT deployment from pilot to production without changing infrastructure, reconfiguring devices, or sacrificing reliability.

- Seamless scaling from 1 to millions of devices
- Developer-friendly APIs
- Automated provisioning
- Future-proof eUICC technology
- Robust integration options
- Enterprise-grade SLAs

Connect with Hologram

Supercharge your IoT operations

Prevent outages before they impact revenue.

Prevent embarrassing service disruptions and frustrating revenue losses with multi-core technology that automatically switches networks before outages affect your customers.

Expand globally without the headaches.

Enter new markets confidently with a single SIM that works across 190+ countries and 550+ carriers. Avoid delayed expansion plans due to local carrier negotiations, regulatory hurdles, and coverage gaps.

Deploy with confidence, not crossed fingers.

Validate your device configurations before sending devices into the field. Identify and fix connectivity issues during development, not during expensive rollouts when budgets and deadlines are on the line.

Take back control of your IoT spending.

Gain unprecedented visibility into your connectivity costs with detailed data usage reporting that prevents budget overruns. Understand exactly how and where your devices consume data, then optimize for it.

Focus on growth, not troubleshooting.

Replace connectivity firefighting with strategic innovation by automating routine device management tasks. Free your technical talent to focus on product improvements that drive growth instead of constantly troubleshooting connectivity.

> With Hologram, we get the ability to scale on top of systems that we trust and we get to do it in a cost-effective way.

Customer success story

Verkada

Creating new revenue streams with Hologram

Verkada has a huge footprint in the physical security industry with video security cameras, access control, environmental sensors, and alarm products, all managed via their cloud-based software platform. Increasingly their customers sought to add their services in areas that were remote with no internet access or in areas challenging to hardwire.

Previous challenges

- Customers couldn't connect in remote or difficult areas
- Customers worldwide
- Reliance on unreliable network infrastructure
- Poor network speeds

Hologram's solution

- Pre-integrated SIM with immediate connectivity
- The same SIM in every device, anywhere in the world
- Manage and troubleshoot SIMs remotely
- Multi-carrier redundancy
- Performance to stream high quality video

Customer success story

Seamless business operations nation-wide

Farmer's Fridge operates 2,000+ smart vending machines across 22 US markets, delivering fresh meals 24/7. Their connected infrastructure depends on always-on cellular IoT connectivity to process transactions, manage inventory allocation, and maintain operations around the clock.

Previous challenges

- Complex deployments with multiple carrier relationships
- Limited ability to expand to challenging locations
- Inconsistent connectivity impacted revenue and damaged customer relationships
- High connectivity costs hindered rapid growth

Hologram's solution

- One contract with access to 550+ carriers globally
- Reliable connectivity in previously difficult locations
- Multi-carrier redundancy and Outage Protection keep vending machines operational 24/7
- 50% reduction in connectivity costs feed up capital to reinvest in expansion and product development

Customer success story

SundayPower

Accelerating Norway's renewable energy transition

Sunday Power is Norway's largest Solar as a Service provider, operating 100+ commercial rooftop solar installations. Their business model depends on real-time data from every installation to monitor performance, bill customers accurately, and deliver transparency through customer-facing dashboards.

Previous challenges

- Connectivity outages caused loss of critical data and revenue, threatening their entire business model
- Unreliable APIs from their previous provider created downtime that impacted both operations and customer-facing services
- Pricing models from other cellular IoT providers weren't cost-effective for their high-volume, low-data fleet

Hologram's solution

- Superior technical platform and APIs deliver reliable, always-on connectivity that prevents operational and revenue disruptions
- Pay-as-you-go pricing model enables accurate forecasting and cost control as they scale
- Powerful device management tools reduce time to issue identification and eliminate operational stress

Hologram features

Hyper SIMs

Multi-profile eUICC SIM cards with intelligent, programmable orchestration layer

Global coverage

Access 550+ carriers in 190+ countries and always connect to the strongest signal. Seamlessly connect with over 550 carriers (including AT&T, T-Mobile, & Verizon) worldwide, combining native and roaming capabilities. Hyper SIMs automatically connect to the strongest signal.

Customizable connectivity

Seamlessly switch profiles automatically or on demand to optimize for cost, performance, and coverage.

Future ready

Push updates over-the-air during the whole device life cycle. No more swapping SIMs or touching hardware.

Blazing performance

Latency as low as 50ms for near-instant data transfer and seamless operations.

Hologram features

Outage Protection

Keep mission-critical devices online

Multi-core SIMs with Fallback technology

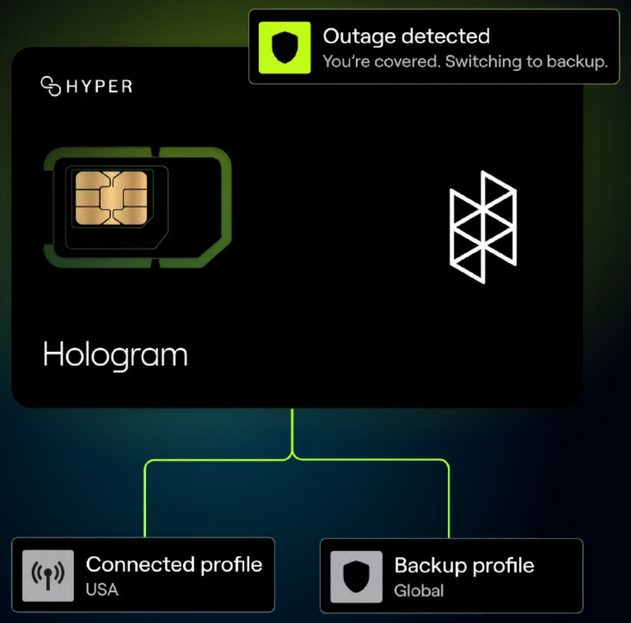
Hyper SIMs have multiple cores, which provide independent paths to the Internet. If an outage is detected, the SIM automatically switches to the backup core for uninterrupted connectivity.

Roaming vs. Fallback

Standard roaming is like having a car that can drive on many different roads. If one road is blocked, the driver can take another. But the car only has one engine – the carrier's mobile core. If that engine fails, the car is stranded regardless of what road it's on. Hologram's Outage Protection is like having a car with two completely independent engines. If the first engine fails, the second one kicks in automatically so the car never stops moving.

The industry's only uptime guarantee

Outage Protection delivers the most reliable connectivity in cellular history with a 99.95% uptime, contractually guaranteed. Historical uptime is 99.99%.



Hologram features

High performance, native profiles

Ideal for AI and other high-bandwidth applications

Superior performance

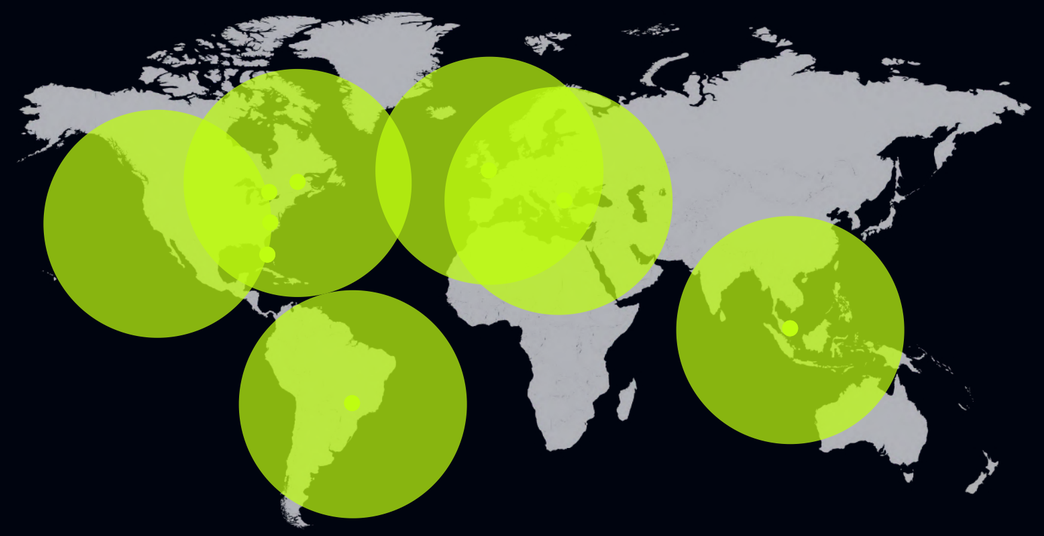
Access to multiple roaming and native profiles on-demand, allowing for speeds up to 500mb/s and latencies as low as 40m/s. Ideal for low latency, high throughput applications such as video monitoring and streaming, autonomous vehicles and robotics, and data monitoring.

Global Points of Presence

Our growing network offers native carrier performance in North America and strong global performance via Points of Presence in Asia, South America and Europe.

Customized, reliable connectivity

Enable native profiles on the primary core for high performance use cases, and fallback to global roaming coverage on the backup core. Never sacrifice performance for reliability again.



Hologram features

Intuitive software and API

Tools you'll actually enjoy using to manage devices at scale

Actionable, real-time information

Visualize every aspect of your fleet's connectivity. Comprehensive, real-time analytics and reporting help you pinpoint misbehaving devices, track device usage, and understand typical device behavior.

Easy device management

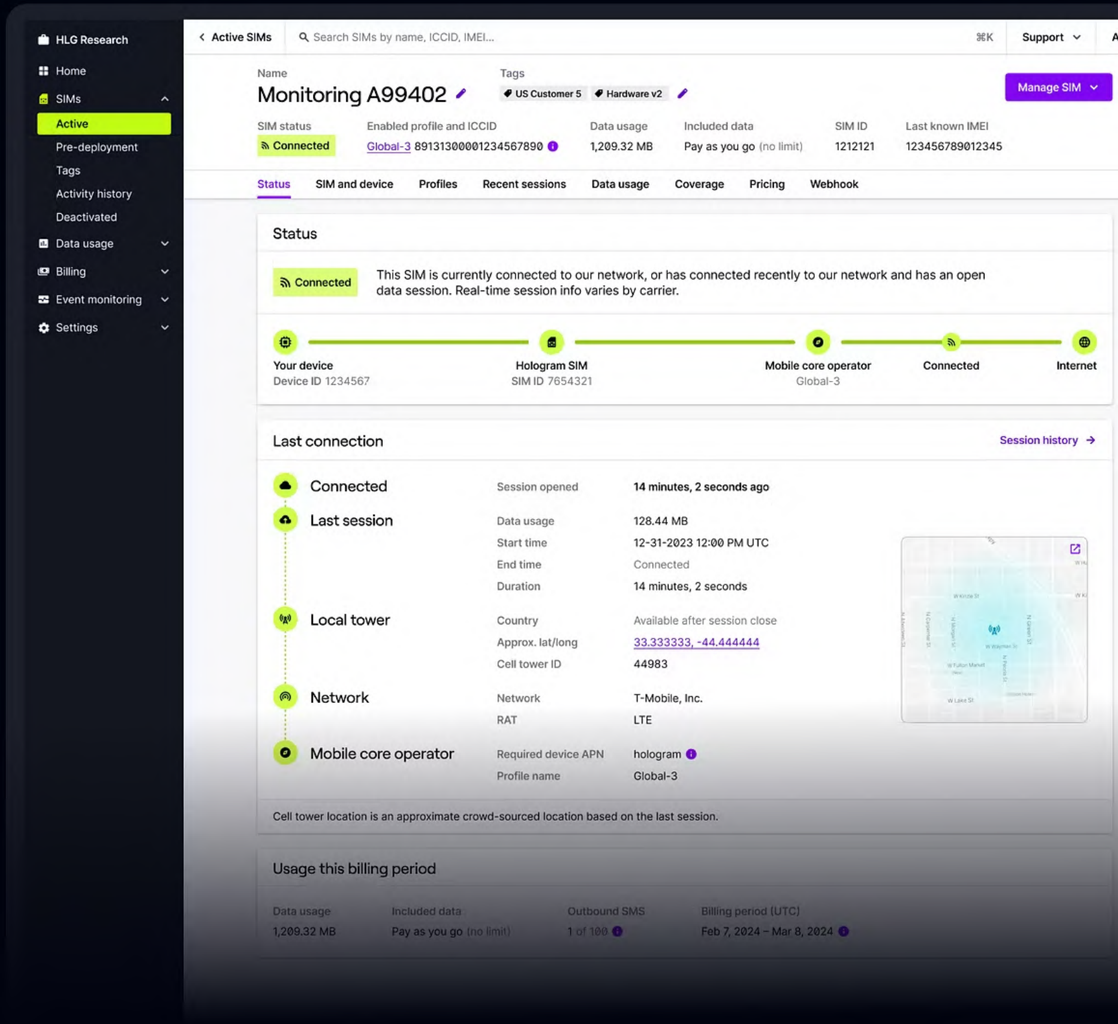
Track, troubleshoot, and take action on one or all of your devices. Pause data usage and set data limits to prevent unexpected costs across your fleet. Communicate with your devices through SMS, secure device tunneling, and more.

API loved by developers

Easily and securely plug your data into your existing applications via our REST API.

Seamless activation

Just a few clicks and your devices are live – whether it's one or one hundred thousand. Save even more time with pre-deployment testing using Hologram Test Mode to test devices and automatically activate upon deployment.



Hologram features

Support from actual experts

Hands-on support from engineers who solve connectivity problems, not people who forward tickets.

Dedicated Solutions Engineers

Talk directly to engineers, not support reps reading from scripts. The person answering your ticket has the technical expertise to solve it. And they'll solve it, from start to finish. No handoffs. No escalations.

Rapid, reliable response

We offer 24/7 customer support coverage with guaranteed SLAs and real-time communication channels.

Deep connectivity expertise

Get more than basic troubleshooting. Our engineers have decades of combined experience across cellular networks, device hardware, firmware, and IoT protocols. We understand how your system works, and can diagnose complex issues fast.

★★★★★

"Switched to Hologram and never looked back – flawless performance + Spanish support"

★★★★★

"Remarkable collaboration with Hologram"

★★★★★

"Hologram support team is professional and knowledgeable"

★★★★★

"Very easy to work with and super reliable"

Hologram features

Advanced security at the forefront

SECURITY

Hologram helps protect from unauthorized access and use.

Devices are isolated from the Internet and each other.

We use a combination of network segmentation and multiple layers of firewalls to shield systems and devices from unauthorized traffic.

All traffic is authenticated and controlled.

Only authorized cellular devices can connect to Hologram's network. Controls such as data limits are enforced for each line of service. All inbound connections to devices are also authenticated.

PRIVACY

Hologram helps safeguard customer and device data.

Hologram has zero access to device data.

End-to-end encryption results in zero access by Hologram and its partners to customer / end-customer device data transmitted via cellular connectivity.

Our systems are compliant.

Customers use our connectivity in HIPAA and PCI compliant products. We conform to strict quality control and data security standards, such as GSMA SAS.

TRUST

Hologram empowers innovators everywhere.

Hologram products have world-class quality.

Our SIMs are manufactured according to robust standards for the quality of products, material, integrity, strength, calibration, and environmental protection.

Hologram is global.

Our products and services are compliant with international regulations like GDPR. Our SIMs can be used in more than 190 countries.

Connect with Hologram

Connectivity tailored to your business

Our team will build a plan that optimizes cost and performance to fit your needs.

Deployment locations

Data usage and fleet size

Native network performance

Expert support hours

Outage protection

Advanced security

We chose to work with Hologram because the prices were very competitive and we were able to save money. Beyond that, what really stood out with Hologram was the technical expertise and customer support.
