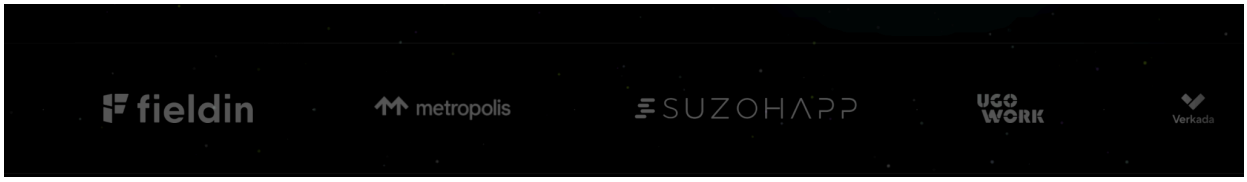
Can we remove the stroke around the card?



Make these brighter. Not full white, but they are too hard to see now. Also sizing is inconsistent across logos.

50%	99.95%	550+	6000+

RELIABILITY

Multi-carrier redundancy, not single-carrier risk.

Tighten up line height on this headline to match the rest of the page

PRICING

Transparent pricing you can build a business on.

Predictable rates, flexible plans, no hidden fees. Your unit economics stay intact from 10 devices to 10,000.

50%

average cost reduction, reported by customers

Capitalize “Average”
Looks like 50% is in Roobert, should be Messina

PARTNERSHIP

An engineering partner, not a support ticket queue.

Our solutions engineers dig into modem logs with you. Scale from 1 to 1 million devices with a team that actually picks up the phone.

1 → 1M

devices with hands-on support

Capitalize “Devices”
1>1M should be in Messina

Change paragraph to “Talk directly to engineers, not support reps reading from scripts. The person answering your ticket has the technical expertise to solve it.”

HYPERSIM TECHNOLOGY

The SIM that keeps your fleet online, everywhere.

Hyper SIM needs to be two words

GLOBAL COVERAGE

550+ carriers, zero coverage gaps

Connect across AT&T, T-Mobile, Verizon, and 550+ global carrier partners with a single SIM. HyperSIM intelligently selects the strongest network so vehicles, cameras, and sensors stay online everywhere they operate.

550+ Carrier partners

OUTAGE PROTECTION

Automatic failover before you lose a single transaction

Multiple independent cores on every SIM provide redundant paths. If an outage is detected, HyperSIM switches to the backup network in seconds, not minutes. We put 99.95% uptime in the contract, not just the marketing.

99.95% Uptime SLA

Switch Inter throughout site to Roobert

Change last sentence of coverage to
“Hyper SIMs intelligently select the strongest available network, so vehicles, cameras, and sensors stay online everywhere they operate.”

Change Outage Protection copy to:
Automatic failover before you lose a single packet
Every Hyper SIM carries multiple network profiles. If one carrier goes down, it switches to a backup network in seconds — no manual intervention, no dropped transactions. We put 99.95% uptime in the contract, not just the marketing.

HOW HOLOGRAM IS DIFFERENT

Anyone can sell you a SIM card. Hologram delivers measurable ROI.

Make this section wider so ROI isn’t on it’s own line on desktop.

HOLOGRAM DASHBOARD

One screen. Every device. Total control.

Most carriers hand you a SIM and a PDF bill. Hologram gives you a real-time command center: visibility into every connection, cost control at the device level, and an API your engineers will actually want to use.

Make headline wider on desktop

Live session data for every SIM

See which carrier each device is on, real-time data consumption, local tower coordinates, and last connection time across your entire fleet.

Set data limits. Get alerts. Prevent surprises.

Configure hard data caps per device or group and receive automated alerts before costs spike. No end-of-month bill shock, ever.

Bulk management at fleet scale

Activate, pause, or reprovision thousands of SIMs in a single action. No manual work, no truck rolls, no support tickets.

REST API and webhooks built for engineers

Automate provisioning and integrate Hologram directly into your existing infrastructure. Private APNs and VPN tunnels included.

Make sure everything is Roobert

Cameras that can't go dark.

Multi-carrier failover for mission-critical video.

A security camera on a single carrier is one outage away from a compliance failure and a furious customer. When AT&T and Verizon both had network outages, Verkada's 28,000+ Hologram-powered devices never missed a frame.

- Automatic multi-carrier failover: cameras stay online when any single carrier goes down
- Pre-certified Verizon path eliminates $20K+ self-certification for US deployments
- One SIM per device for indoor, outdoor, and remote camera deployments worldwide

28,000+

Verkada cameras on Hologram across 85 countries

"When AT&T and Verizon both had outages this year, our devices never went down. That's the flexibility Hologram gives us."

PHYSICAL SECURITY

"When AT&T and Verizon both had outages this year, our devices never went down. That's the flexibility Hologram gives us."

Brandon Davito — SVP of Product Management

33,000+ Customers worldwide

28,000+ Devices on Hologram

85 Countries served

CHALLENGE

33,000+ enterprise customers depend on always-on security cameras. Single-carrier connectivity meant any outage put customer trust and revenue at risk.

SOLUTION

HyperSIM with multi-carrier failover ensures cameras stay online through any carrier outage. One SIM per device, worldwide, no carrier lock-in.

Adjust layout so video is on left side of card, inset within the card, and has the same margin/padding as the rest of the content.
Move stats to right side of box

CUSTOMER SUCCESS

Teams that switched to Hologram and never looked back.
